

# EIBAnalyzer

The recording device for EIB/KNX diagnostics without a connected PC  
(recorded data will be stored on a standard USB memory stick)

## Highlights

- Recording of EIB/KNX-telegrams without a PC
- No bus manipulation during recording
- Incl. 2 GB USB-Stick
- EIBDoktor software included

## Fields of application

Sometimes a customer is reporting frequent failures in his EIB/KNX installation. But of course the problem only occurs occasionally, one or two times each month. Now it would be very helpful to record all data of the EIB/KNX bus, and to analyze the data after the customer has reported a failure.

You can do that with the EIBAnalyzer, without leaving a complete PC for the logging at your customer's place. Simply install the rail mountable analyzer device, plug in an USB stick, and let it run. After the problem occurred, unplug the stick, and use the included EIBDoktor software to check out what exactly had happened on the EIB/KNX.

## Contents of delivery

- EIBAnalyzer
- 2GB USB flash memory stick
- EIBDoktor software
- Documentation
